

With its innovative carbon structure, the ULTRA-LIGHT CARBON X40PW is the thinnest, lightest and strongest body-repair lamp on the market. It also boasts the most powerful lighting system alongside a wide choice of different display screens. The display screens and the lighting colours can be interchanged at will, allowing the device to be easily customised depending on your personal preferences. This equipment comes supplied with a cigarette-lighter lead.

## SPECIFICATIONS

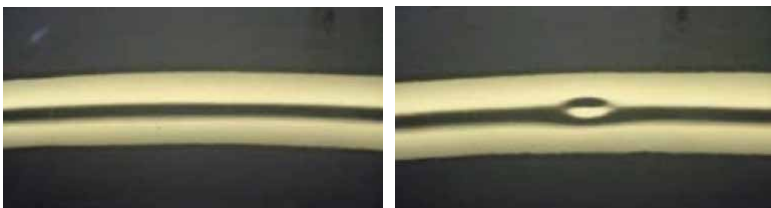

- Lightweight (629 g / 1,258 lbs)
- Ultra-thin (6 mm / 1/4")
- Robust
- Can be positioned with suction cups

## SIZE

Screen size:  
Length: 300 mm / Width: 150 mm / Depth: 6 mm

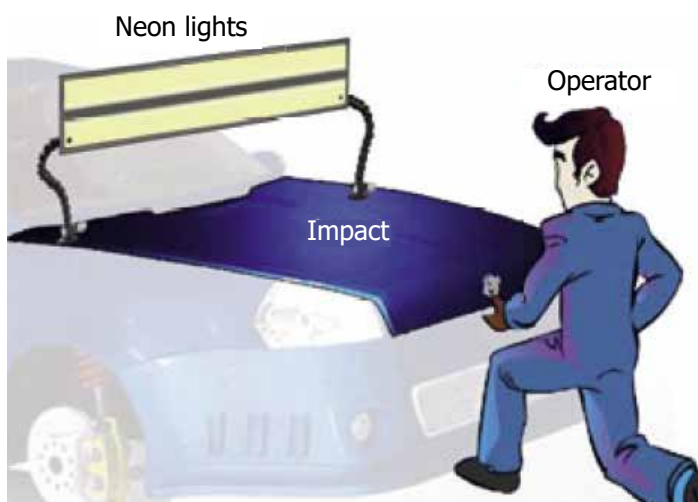

## USING THE BODYWORK-REPAIR LAMP

The light has an important role in bodywork repairs. The lighting board shows a reflection of the black stripes allowing panel beaters to easily evaluate the extent of deformations and the dent's depth. Further more, it enables automotive-repair professionals to better control the force needed to carry out these various dent-removal procedures.

## POSITIONING THE BLACK STRIPES

- For a good view of the dent, the black stripes should be positioned parallel to the bottom of the defect.
- The operator must position themselves to face the black stripes.

Supplied with a cigarette-lighter lead (4.5 m)
